

Stainless Steel Flange Protector Bands With Closed Cell Sponge Liner & Zerk Grease Fitting

- Purpose:** To protect flange faces from corrosion.
- Material:** 316L stainless steel band (Non-Metallic available), clamp and zerk fitting. The flange band has a closed cell sponge rubber lining.
- Advantages:** Bands are tailored for each individual flange. When the band is secured around the made-up flange, grease can be injected through the zerk fitting. The grease will fill the open area between the two flanges, thus excluding moisture and air.
- Applications:** Environments such as processing plants with corrosive atmospheres, offshore drilling platforms, brine wells, etc.
- Temperature:** -40⁰F to +200⁰F
